(54) Title: PACKAGING FOR PULVERULENT MATERIAL

(57) Abstract: Packaging and method for the production thereof. A packaging for pulverulent material is proposed consisting of a container part (2), made up of a laminate consisting of paper (board) (20), metal foil (21) and plastic material (22). The powder is filled into such a container (2) and a seal (13) consisting of a plastic film that is fixed to the container wall by heat sealing is applied on top of the powder. A small gap remains between the film (13) and the lid (3) to be placed on the container (in the closed state). A scoop (8) is fitted in this gap. After first use, the scoop is snapped into a fixing (7) in the lid. The lid (3) is provided with an elevation (9, 10) for accommodating the scoop in the lid.
